EPOXY CHEMISTRY
FLOORING SOLUTIONS

Epoxy Chemistry Ltd

Epoxy Flooring Solutions for Durable, Hygienic Surfaces

Company Overview

High Performance Epoxy Solutions

Epoxy Flooring Solutions for Durable, Hygienic Surfaces

> **Providing durable, chemical-resistant, and aesthetically appealing epoxy systems tailored for industrial and commercial needs.**

About Us

Epoxy Chemistry Ltd is a specialized company focused on the development, supply, and application of high-performance epoxy-based solutions.

We serve a wide range of industries by providing durable, chemical-resistant, and aesthetically appealing epoxy systems tailored to both industrial and commercial needs.

Our commitment to quality and technical expertise ensures that every project, whether a factory floor or a decorative showroom, receives a solution built to last.

Our Services

Comprehensive solutions from consultation to installation.

1 Epoxy Flooring Installation

Seamless, durable flooring systems for factories, warehouses, hospitals, and commercial spaces designed to withstand heavy traffic.

2 Surface Protection

Coatings that protect concrete, steel, and other substrates from corrosion, wear, and chemical exposure.

3 Industrial Coatings & Linings

Heavy-duty epoxy systems for tanks, pipelines, and processing plants ensuring safety and longevity.

4 Decorative Finishes

Visually appealing floors for showrooms, offices, and residential interiors that combine style with substance.

5 Consultation & Support

Expert guidance on selecting the right epoxy system and technical support on proper application methods.

Epoxy Chemistry Products

Versatile solutions for every environment.

- **Self-leveling epoxy coatings**
  Smooth finishes for easy cleaning.
- **Epoxy Screeds**
  Heavy-duty flooring systems for high impact.
- **Anti-static (ESD) coatings**
  Essential for electronic manufacturing.
- **Epoxy mortars & repair compounds**
  Quick fixes for damaged surfaces.
- **Protective coatings**
  Specialized for steel and concrete.

Epoxy solutions are highly versatile and commonly used in:

- Industrial Facilities
- Commercial Spaces
- Parking Garages
- Healthcare
- Food & Beverage
- Residential Interiors
- Parking Garages

The Process

1

Surface Preparation

Grinding or shot blasting the surface, followed by cleaning to remove dust, oil, and contaminants.

2

Priming

Application of an epoxy primer to enhance adhesion between the substrate and the coating.

3

Base Coat

Applying the main epoxy layer (self-leveling or screed) depending on the specific use case.

4

Optional Additions

Incorporating anti-slip aggregates, decorative flakes, or color pigments.

5

Topcoat / Seal

A protective layer is added for durability, gloss retention, and chemical resistance.

6

Curing

The surface is left to cure, typically 24–72 hours depending on the system used.

Our Clients

- Talanta Studium
- Atlas copco EA limited
- nyayo stadium changing rooms
- Nairobi hospital
- kasarani stadium changing rooms
- biocare medical supplies
- Kitui hospital
